C5 Tail Light Seal Installation Instructions.

www.southerncarparts.com

Remove the tail lights one at a time with a T-15 Torx head...

Clean the edges of the tail light with window cleaner... Heck while your at it clean all of the grime from behind the tail light as the seal will prevent that from happening again.

All clean and ready for the new seal...

Peel the adhesive backing (yellow strip) off the seal. Starting at the top or bottom of the taillight, gently press the seal onto the tail light all the way around the perimeter. You want the big side of the seal facing OUT and the thin side facing the front of your car.

Gently slide the tail light back into the bumper and screw in the Torx screws. Repeat for each tail light
